JOURNAL OF CRYSTAL GROWTH

Subject index

Alloys
- binary 139
- of copper (aluminum gallium) sulphur selenide 388
- organic 115
Alumina 79
Aluminum
- arsenide 205
Apatite 91
Apparatus
- for melt growth
- - by focused ion beam
- - - of gallium arsenide 244
- for miscellaneous purposes
- - ampoule failure sensor 41
- - growth in high magnetic fields 435
Arginine
- (L) phosphate monohydrate 336, 447
- (L) phosphate monohydrate, deuterated 336

Barium
- titanate 355
Bismuth
- germanium oxide 361
- silicate 444
- strontium cuprate 65
- telluride 365

Cadmium
- telluride 287, 327
Calcium
- phosphate 91
Cellular growth
- of gallium arsenide 264
- theory of 398, 406
Characterization
- of bubbles in bismuth germanium oxide 361
- of heteroepitaxial systems 213
- X-ray diffraction analysis of III–V compounds 205
Computer simulation
- of chemical vapor deposition 191
- of concentration profiles 28
- of nucleation rate 128
- of silicon nitride 157
Convection 182, 237, 308, 315, 398, 406, 414, 435

Copper
- (aluminum gallium) sulphur selenide 388

Dendritic growth
- of lead molybdate 148
- of organic alloys 115
- theory of 398, 406
Deuterated L-arginine phosphate 336
Device characterization
- double heterostructures 277
- electronic materials 9, 308
- lasers 19, 277, 282, 287
Diamond 441, 454
Diffusional control
- of arsenic in gallium arsenide 28
- of crystal growth, theory of 381
- of lithium in gallium arsenide 9
Dissolution
- of L-arginine phosphate monohydrate 447

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
- chemical 45, 277, 336, 444, 447
Eutectic growth
- of silver–copper 175

Gallium 414
- antimonide 426
- arsenide 9, 28, 205, 244, 264, 299
- indium arsenide 33
Garnets 84, 349

Indium
- antimonide 435
- gallium arsenide 277, 432
- phosphide 1, 19, 277, 291

Kinetics
- of growth 1, 33, 100, 167, 175, 191, 308, 315, 444
- of interface control 219
- of nucleation 128, 299

Lasers, see Device characterization
Lasers, crystals for
– yttrium aluminum garnet 349
Lead
– molybdate 148
Lithium
– borate 128
– niobate 45, 57
– triborate 343

Maleic anhydride 370
Melt growth technique
– by Bridgman–Stockbarger method
– – of bismuth telluride 365
– by Czochralski method
– – of bismuth silicate 444
– – of gallium antimonide 426
– – of gallium arsenide 264
– – of lead molybdate 148
– – of lithium niobate 45
– – of strontium barium niobate 439
– – of yttrium aluminum garnet 349
– by floating zone method
– – of titanium boride 451
– – of yttrium aluminum garnet 349
– by pedestal growth method
– – of alumina 79
– by uniaxial solidification
– – of gallium 414
– – of organic alloys 115
– – theory of 182
– by vertical gradient freeze method
– – of indium antimonide 435
– theory of 237
Microgravity, growth under
– of tin 237
Morphological stability
– of binary alloy during directional solidification 139
– of gallium arsenide 264
– of tin 237
– in physical vapor deposition 219
– theory of 381

Nucleation
– of diamond 441
– of lithium borate 128
– of tellurium 123
Numbers
– Grashof 237, 414
– Peclet 237
– Rayleigh 237, 414
– Schmidt 237

Octacalcium phosphate 91
Organic alloys 115

Particles (solid)
– attachment to interface 406
– concentration 398
Phase diagrams
– of silver–copper 175
– of water 51
Potassium
– titanyl phosphate 51
Precursor
– for cadmium telluride 327
– for gallium indium arsenide 33
– for II–VI compounds 327

Rare earth
– garnets 84

Silicon 191
– dioxide 308, 315
– nitride 157
Silver
– copper 175
Solid growth technique
– by recrystallization
– – of diamond 441
Solution growth technique
– by flux method
– – of lithium triborate 343
– – of strontium calcium cuprate 72
– by gel method
– – of maleic anhydride 370
– by hydrothermal growth
– – of potassium titanyl phosphate 51
– by low temperature method
– – of L-arginine phosphate monohydrate 336, 447
– – of deuterated L-arginine phosphate 336
– – of octacalcium phosphate 91
– – of triglycine sulphate 100
– theory of 107
Stefan problem or moving boundary problem
– of binary alloy 139
– of cell formation 264
Strontium
– barium niobate 439
– calcium cuprate 72
Superlattices, multilayers
– of III–V compounds 205
Surface energy, determination
– of silicon nitride 157
– of triglycine sulphate 100
Surface structure
– of silicon nitride 157

Tellurium 123
Thin film growth, epitaxy
– by focused ion beam
– – of gallium arsenide 244

– by liquid phase epitaxy
– – of gallium arsenide 28
– – of rare earth garnets 84
– by metalorganic molecular beam epitaxy
– – of indium gallium arsenide 277
– – of indium phosphide 277
– by molecular beam epitaxy
– – of bismuth telluride 365
– – of cadmium telluride 287
– – of zinc telluride 282
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of diamond 454
– – – of indium phosphide 291
– – – theory of 191, 308
– – through evaporation and condensation
– – – of bismuth strontium cuprate 65
– – through metalorganic chemical vapor deposition
– – – of barium titanate 355
– – – of cadmium telluride 327
– – – of gallium arsenide 299
– – – of gallium indium arsenide 33
– – – of indium gallium arsenide 432
– – – of indium phosphide 1, 19
– – – of lithium niobate 57
– – – of silicon dioxide 308, 315
– – – of zinc selenide 429
– – – theory of 33, 249
Tin 237
Titanium
– boride 451
Triglycine sulphate 100

Vapor growth technique
– by chemical transport
– – of copper (aluminum gallium) sulphur selenide 388
– by evaporation and condensation
– – of tellurium 123
– – theory of 219

Yttrium
– aluminum garnet 349

Zinc
– selenide 429
– telluride 282
